# Ana Garcia

956-212-7174 | anagarcia3174@gmail.com | linkedin.com/in/anagarcia17 | github.com/anagarcia3174 | anagarcia.vercel.app

## Education

**University of Texas Rio Grande Valley** December 2024
*Bachelor of Science in Computer Science - **GPA: 3.96***

**South Texas College** August 2021
*Associate of Arts in Interdisciplinary Studies*

## Technical Skills

**Languages**: TypeScript, JavaScript, Go, SQL, Dart, HTML/CSS
**Frontend/Mobile**: React, React Native, Expo, TanStack Query, Flutter
**Backend**: Go, chi, pgx/v5, sqlc, golang-migrate, Node.js, Express.js, REST APIs
**Databases & Infra**: PostgreSQL, Supabase, MongoDB, Firebase, Docker
**Developer Tools**: Git, GitHub, TDD, Agile Methodology

## Experience

**NailzByDardo** August 2026 – Present
*Full-Stack Developer — Independent / Freelance*

- Owned the entire full-stack lifecycle solo — from schema design through a **Go** backend to a production **React/TypeScript** frontend — for a salon management system actively used to run a real business.
- Architected a strict **layered backend** (handler → service → repository) using **Go, chi, pgx/v5, and sqlc**, with versioned schema migrations via **golang-migrate** across an 8-table **PostgreSQL** schema.
- Built the frontend data layer with **TanStack Query**, centralizing cache invalidation logic across appointment, client, and financial data to keep UI state reliably in sync with the API.
- Designed a reusable **layout/scroll architecture** shared across all pages in React with CSS Modules, and modeled all financial data as integer cents to guarantee precise revenue, discount, and tip calculations.

**University of Texas Rio Grande Valley** August 2024 – December 2024
*Academic Assistant — Web Development Course*

- Reviewed and evaluated student web development assignments, assessing code quality and correctness.
- Provided written technical feedback identifying errors and guiding students toward correct solutions.

## Projects

**Talkie** | ***Go, PostgreSQL, React Native / Expo, TypeScript, TanStack Query*** September 2026 – Present
*iOS app for commenting on movies and TV shows at exact timestamps*

- Built and shipped a **full-stack iOS app** solo, from a **Go** REST API on Fly.io to a **React Native/Expo** client, with a gesture-driven **timeline scrubber** that shows comments as the viewer reaches each scene.
- Developed the API with **chi, pgx/v5, and sqlc** on **PostgreSQL**, verifying **Supabase** JWTs for Apple and Google sign-in and proxying TMDB so the API key never reaches the client.
- Met App Store content requirements with a word filter, reporting, and user blocking reflected instantly through **TanStack Query** cache invalidation.

**Express Backend Starter** | ***TypeScript, Node.js, Express.js, MongoDB, JWT, AWS SES*** December 2024
*Production-ready API boilerplate with authentication and email services*

- Eliminated auth boilerplate by implementing a production-ready **JWT system** with access/refresh token rotation, covering registration, login, logout, and token refresh out of the box.
- Reduced email integration effort by building a full **AWS SES service** with pre-configured EJS templates for verification, password reset, and account notifications.
- Hardened the API with **rate limiting, input validation, CORS configuration**, and a clean TypeScript service-layer architecture ready for immediate production use.
