EDUCATION

University of Texas Rio Grande Valley
Bachelor of Science in Computer Science - GPA: 3.96

December 2024

South Texas College
Associate of Arts in Interdisciplinary Studies

August 2021

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Dart, Java, C++, C#, HTML/CSS, SQL
Frameworks/Technologies: React, React Native, Expo, Node.js, Express.js, Flutter, Firebase
Developer Tools: Git, GitHub, Agile Methodology, TDD

PROJECTS

Talkie | *React Native / Expo, TypeScript, Supabase, NativeWind, Zustand*
Social mobile app for tracking and reviewing movies and TV shows

2025–Present

- Engineered a **full-stack social mobile app** with a PostgreSQL/Supabase backend and live TMDB API integration, supporting movie and TV tracking, review writing, and curated media lists.
- Secured user data end-to-end by implementing **Apple Sign-In (OAuth)**, Supabase Auth, and row-level security (RLS) policies that enforce per-user data boundaries at the database layer.
- Architected a scalable **service** → **Zustand store** → **component** pattern across 10+ domain-scoped services with consistent error handling, keeping async operations predictable and maintainable.

Folio | *Flutter, Firebase, Dart*
Mobile app connecting service-based professionals with local clients

September 2024

- Accelerated user onboarding by building a complete auth flow with **Firebase Auth, Firestore, and Storage**, enabling secure registration and seamless profile creation for both professionals and clients.
- Delivered **location-aware discovery** by implementing geospatial queries that surface nearby professional portfolios based on the user's real-time location.
- Achieved high reliability across all devices through **400+ unit and widget tests** and ~40 integration tests, catching edge cases before release.

Express Backend Starter | *TypeScript, Node.js, Express.js, MongoDB, JWT, AWS SES*
Production-ready API boilerplate with authentication and email services

December 2024

- Eliminated auth boilerplate by implementing a production-ready **JWT system** with access/refresh token rotation, covering registration, login, logout, and token refresh out of the box.
- Reduced email integration effort by building a full **AWS SES service** with pre-configured EJS templates for verification, password reset, and account notifications.
- Hardened the API with **rate limiting, input validation, CORS configuration**, and a clean TypeScript service-layer architecture ready for immediate production use.

EXPERIENCE

University of Texas Rio Grande Valley
Academic Assistant — Web Development Course

August 2024 – December 2024

- Reviewed and evaluated student web development assignments, assessing code quality and correctness.
- Provided written technical feedback identifying errors and guiding students toward correct solutions.
